

# GROUND CLOUD SAFETY

GroundCloud Safety Training is the best way to keep your fleet trained and safety compliant. Our training library contains hundreds of safety modules covering professional techniques that will prepare drivers for any situation they might face on the road.

## PROFESSIONAL DRIVER TRAINING

Get your training from the best. All our training modules are designed in-house by industry veteran and safety guru Jerry Veres to meet the needs of today's drivers. They cover relevant topics on professional driving behavior and road techniques that will help your drivers stay compliant and instill a culture of safety within your team.

## AUTOMATED CAPTIVE COACHING

Drivers using the app are all but assured to be up to date on their safety. Training modules are automatically sent within the app and must be completed before the workday can begin. Following a text and video module, drivers prove their understanding with a brief quiz, and e-signature indicating completion.

## FLEET-WIDE SAFETY MONITORING

Easily see that your team is up to date and compliant with instant proof of your team's training record and signed confirmation of completion. Drivers are given scorecards rating their safety compliance so there are no surprises.

### TRAINING LIBRARY

#### Professional Driving Techniques

Speeding  
Harsh Acceleration  
Seat Belt & Risky Behaviors
